

Material Safety Data Sheet

R417A

Safety Data Sheet (Conforms to Regulation (EC) No 2015/830)

Current Issue Date: April, 2016

SECTION 1 IDENTIFICATION OF THE SUBSTANCE / MIXTURE AND OF THE COMPANY / UNDERTAKING

1.1.Product Identifier

| Product name | R417a |
|----------------------------------|--|
| Synonyms | Not Available |
| Proper shipping name | REFRIGERANT GAS, N.O.S., such as mixture F1, mixture F2 or mixture F3 (contains tetrafluoroethane and pentafluoroethane) |
| Other means of identification | Not Available |

1.2. Relevant identified uses of the substance or mixture and uses advised against

| Relevant identified uses | Use according to manufacturer's directions. The use of a quantity of material in an unventilated or confined space may result in increased exposure and an irritating atmosphere developing. |
|--------------------------|---|
| | Before starting consider control of exposure by mechanical ventilation. |
| Uses advised against | Not Applicable |

1.3. Details of the supplier of the safety data sheet

| Distributor for Middle-East | Brothers Gas |
|-----------------------------|---|
| Address | 204, Al Fattan Plaza, Al Garhoud, Dubai |
| Telephone | +971 4 251 7979 |
| Fax | +971 4 251 7900 |
| Website | www.brothersgas.com |
| Email | sales@brothersgas.ae |

1.4. Emergency telephone number

| Association / Organisation | Not Available |
|-----------------------------------|------------------|
| Emergency telephone numbers | +971 50 221 2656 |
| Other emergency telephone numbers | Not Available |

SECTION 2 HAZARDS IDENTIFICATION

2.1.Classification of the substance or mixture

Considered a dangerous mixture according to Reg. (EC) No 1272/2008 and their amendments. Classified as Dangerous Goods for transport purposes.

CHEMWATCH HAZARD RATINGS

| | Min | Max |
|--------------|-----|------------------------|
| Flammability | 0 | |
| Toxicity | 1 | 0 = Minimi |
| Body Contact | 1 | 1 = Low |
| Reactivity | 1 | 2 = Modera 3 = High |
| Chronic | 0 | 4 = Extrem |

| DSD classification | In case of mixtures, classification has been prepared by following DPD (Directive 1999/45/EC) and CLP Regulation (EC) No 1272/2008 regulations |
|-----------------------------------|--|
| DPD classification ^[1] | R44 Risk of explosion if heated under confinement. |

| Legend: | Classification drawn from EC Directive 67/548/EEC - Annex I ;. Classification drawn from EC Directive 1272/2008 - Annex VI | | | | |
|---|--|--|--|--|--|
| Classification according to regulation (EC) No 1272/2008 [CLP] ^[1] | Gas under Pressure (Liquefied gas) | | | | |
| Legend: | Classification drawn from EC Directive 67/548/EEC - Annex I ;. Classification drawn from EC Directive 1272/2008 - Annex VI | | | | |
| 2.2. Label elements | | | | | |
| CLP label elements | | | | | |
| SIGNAL WORD | WARNING | | | | |
| Hazard statement(s) | | | | | |
| H280 | Contains gas under pressure; may explode if heated. | | | | |
| Supplementary statement | (s) | | | | |
| EUH044 | Risk of explosion if heated under confinement. | | | | |
| Precautionary statement(s |) Prevention | | | | |
| Not Applicable | | | | | |
| Precautionary statement(s |) Response | | | | |
| Not Applicable | | | | | |
| Precautionary statement(s |) Storage | | | | |
| P410+P403 | Protect from sunlight. Store in a well-ventilated place. | | | | |
| Precautionary statement(s |) Disposal | | | | |
| Not Applicable | | | | | |
| 2.3. Other hazards | | | | | |
| Inhalation may produce health | damage*. | | | | |

Cumulative effects may result following exposure*.

May produce discomfort of the respiratory system and skin*.

ï

Repeated exposure potentially causes skin dryness and cracking*.

Vapours potentially cause drowsiness and dizziness*.

REACh - Art.57-59: The mixture does not contain Substances of Very High Concern (SVHC) at the SDS print date.

SECTION 3 COMPOSITION / INFORMATION ON INGREDIENTS

3.1.Substances

See 'Composition on ingredients' in Section 3.2

3.2.Mixtures

SECTION 4 FIRST AID MEASURES

| 4.1. Description of first aid measures | | | | |
|--|--|--|--|--|
| General | If skin contact occurs: If skin contact occurs: If immediately remove all contaminated clothing, including footwear. If licks skin and harr with running water (and soap if available). Seek medical attention in event of irritation. In case of cold burns (frost-bite): Move casualty into warmth before thawing the affected part; if feet are affected carry if possible Bathe the affected area immediately in luke-warm water (not more than 35 deg C) for 10 to 15 minutes, immersing if possible and without rubbing Do NOT apply hot water or radiant heat. Apply a clean, dry, light dressing of 'fulfed-up' dry gauze bandage If all imb is involved, radise mere intense pain occurs provide pain killers such as paracetomol Transport to hospital, or doctor Subsequent blackening of the exposed tissue indicates potential of necrosis, which may require amputation. If product comes in contact with eyes remove the patient from gas source or contaminated area. Take the patient to hearest eye wash, shower or other source of clean water. Open the explei(s) with clean, cool water for at least 15 minutes. Have the patient lie or sit down and tilt the head back. Hold the explei(s) does only on the material to explande. The patient may be in great pain and wish to keep the eyes (losed. It is important that the material is rinsed from the eyes to prevent further damage. The patient may be in great pain and wish to keep the eyes (losed. It is important that the material is rinsed from the eyes to prevent further damage. The patient amount objerstie light, protect the eyes with a clean, loosely tied bandage. The patient control torist light, protect the eyes with a clean, loosely tied bandage. The patient cannot tolerate light, protect the eyes with a clean, loosely tied bandage. The patient cannot tolerate light, protect the eyes with a clean, loosely tied bandage. The patient cannot tolerate light, protect the eyes with a clean, loosely tied bandage. The patient cannot tolerate light, protect the eyes with a clean, loosely tied bandage. The p | | | |
| Eye Contact | If product comes in contact with eyes remove the patient from gas source or contaminated area. Take the patient to the nearest eye wash, shower or other source of clean water. Open the eyelid(s) wide to allow the material to evaporate. Gently rinse the affected eye(s) with clean, cool water for at least 15 minutes. Have the patient lie or sit down and tilt the head back. Hold the eyelid(s) open and pour water slowly over the eyeball(s) at the inner corners, letting the water run out of the outer corners. The patient may be in great pain and wish to keep the eyes closed. It is important that the material is rinsed from the eyes to prevent further damage. Ensure that the patient looks up, and side to side as the eye is rinsed in order to better reach all parts of the eye(s) Transport to hospital or doctor. Even when no pain persists and vision is good, a doctor should examine the eye as delayed damage may occur. If the patient cannot tolerate light, protect the eyes with a clean, loosely tied bandage. Ensure verbal communication and physical contact with the patient. DO NOT allow the patient to tightly shut the eyes DO NOT allow the patient to tightly shut the eyes DO NOT introduce oil or ointment into the eye(s) without medical advice DO NOT use hot or tepid water. | | | |

| Skin Contact | If skin contact occurs: Immediately remove all contaminated clothing, including footwear. Flush skin and hair with running water (and soap if available). Seek medical attention in event of irritation. In case of cold burns (frost-bite): Move casualty into warmth before thawing the affected part; if feet are affected carry if possible Bathe the affected area immediately in luke-warm water (not more than 35 deg C) for 10 to 15 minutes, immersing if possible and without rubbing DO NOT apply hot water or radiant heat. Apply a clean, dry, light dressing of "fluffed-up" dry gauze bandage If a limb is involved, raise and support this to reduce swelling If an adult is involved and where intense pain occurs provide pain killers such as paracetomol Transport to hospital, or doctor Subsequent blackening of the exposed tissue indicates potential of necrosis, which may require amputation. |
|--------------|---|
| Inhalation | Following exposure to gas, remove the patient from the gas source or contaminated area. NOTE: Personal Protective Equipment (PPE), including positive pressure self-contained breathing apparatus may be required to assure the safety of the rescuer. Prostheses such as false teeth, which may block the airway, should be removed, where possible, prior to initiating first aid procedures. If the patient is not breathing spontaneously, administer rescue breathing. If the patient does not have a pulse, administer CPR. If medical oxygen and appropriately trained personnel are available, administer 100% oxygen. Summon an emergency ambulance. If an ambulance is not available, contact a physician, hospital, or Poison Control Centre for further instruction. Keep the patient warm, comfortable and at rest while awaiting medical care. MONITOR THE BREATHING AND PULSE, CONTINUOUSLY. Administer rescue breathing (preferably with a demand-valve resuscitator, bag-valve mask-device, or pocket mask as trained) or CPR if necessary. |
| Ingestion | Not considered a normal route of entry. Avoid giving milk or oils. Avoid giving alcohol. If spontaneous vomiting appears imminent or occurs, hold patient's head down, lower than their hips to help avoid possible aspiration of vomitus. |

4.2 Most important symptoms and effects, both acute and delayed

See Section 11

4.3. Indication of any immediate medical attention and special treatment needed

for intoxication due to Freons/ Halons;

- A: Emergency and Supportive Measures
- Maintain an open airway and assist ventilation if necessary
- Treat coma and arrhythmias if they occur. Avoid (adrenaline) epinephrine or other sympathomimetic amines that may precipitate ventricular arrhythmias. Tachyarrhythmias caused by increased myocardial sensitisation may be treated with propranolol, 1-2 mg IV or esmolol 25-100 microgm/kg/min IV.
- Monitor the ECG for 4-6 hours
- B: Specific drugs and antidotes:
- There is no specific antidote

C: Decontamination

- ▶ Inhalation; remove victim from exposure, and give supplemental oxygen if available.
- Ingestion; (a) Prehospital: Administer activated charcoal, if available. DO NOT induce vomiting because of rapid absorption and the risk of abrupt onset CNS depression. (b) Hospital: Administer activated charcoal, although the efficacy of charcoal is unknown. Perform gastric lavage only if the ingestion was very large and recent (less than 30 minutes)

D: Enhanced elimination:

- There is no documented efficacy for diuresis, haemodialysis, haemoperfusion, or repeat-dose charcoal.
- POISONING and DRUG OVERDOSE, Californian Poison Control System Ed. Kent R Olson; 3rd Edition
- Do not administer sympathomimetic drugs unless absolutely necessary as material may increase myocardial irritability.
- No specific antidote.
- Because rapid absorption may occur through lungs if aspirated and cause systematic effects, the decision of whether to induce vomiting or not should be made by an attending physician.
- ▶ If lavage is performed, suggest endotracheal and/or esophageal control.
- Danger from lung aspiration must be weighed against toxicity when considering emptying the stomach.
- Treatment based on judgment of the physician in response to reactions of the patient

For frost-bite caused by liquefied petroleum gas:

- If part has not thawed, place in warm water bath (41-46 C) for 15-20 minutes, until the skin turns pink or red.
- Analgesia may be necessary while thawing.
- If there has been a massive exposure, the general body temperature must be depressed, and the patient must be immediately rewarmed by whole-body immersion, in a bath at the above temperature.
- Shock may occur during rewarming.
- Administer tetanus toxoid booster after hospitalization.
- Prophylactic antibiotics may be useful.

• The patient may require anticoagulants and oxygen.

[Shell Australia 22/12/87]

For gas exposures:

BASIC TREATMENT

- Establish a patent airway with suction where necessary.
- Watch for signs of respiratory insufficiency and assist ventilation as necessary.

- Administer oxygen by non-rebreather mask at 10 to 15 l/min.
- Monitor and treat, where necessary, for pulmonary oedema .
- Monitor and treat, where necessary, for shock.
- Anticipate seizures.

ADVANCED TREATMENT

- Consider orotracheal or nasotracheal intubation for airway control in unconscious patient or where respiratory arrest has occurred.
- Positive-pressure ventilation using a bag-valve mask might be of use.
- Monitor and treat, where necessary, for arrhythmias.
- + Start an IV D5W TKO. If signs of hypovolaemia are present use lactated Ringers solution. Fluid overload might create complications.
- Drug therapy should be considered for pulmonary oedema.
- + Hypotension with signs of hypovolaemia requires the cautious administration of fluids. Fluid overload might create complications.
- Treat seizures with diazepam.
- Proparacaine hydrochloride should be used to assist eye irrigation.

BRONSTEIN, A.C. and CURRANCE, P.L.

EMERGENCY CARE FOR HAZARDOUS MATERIALS EXPOSURE: 2nd Ed. 1994

SECTION 5 FIREFIGHTING MEASURES

5.1. Extinguishing media

SMALL FIRE: Use extinguishing agent suitable for type of surrounding fire.

LARGE FIRE: Cool cylinder.

 $\ensuremath{\text{DO}}\xspace$ NOT direct water at source of leak or venting safety devices as icing may occur.

5.2. Special hazards arising from the substrate or mixture

| Fire Incompatibility | • Avoid contamination with oxidising agents i.e. nitrates, oxidising acids, chlorine bleaches, pool chlorine etc. as ignition may result |
|----------------------|--|
|----------------------|--|

5.3. Advice for firefighters

| | GENERAL |
|-----------------------|---|
| | |
| Fire Fighting | Alert Fire Brigade and tell them location and nature of hazard. |
| | Wear breathing apparatus and protective gloves. |
| | Fight fire from a safe distance, with adequate cover. |
| | Use water delivered as a fine spray to control fire and cool adjacent area. |
| | Containers may explode when heated - Ruptured cylinders may rocket |
| | Fire exposed containers may vent contents through pressure relief devices. |
| | High concentrations of gas may cause asphyxiation without warning. |
| Fire/Explosion Hazard | May decompose explosively when heated or involved in fire. |
| | Contact with gas may cause burns, severe injury and/ or frostbite. |
| | Decomposition may produce toxic fumes of; carbon monoxide (CO) carbon dioxide (CO2) hydrogen fluoride, other pyrolysis products typical |
| | of burning organic materialContains low boiling substance: Closed containers may rupture due to pressure buildup under fire conditions. |

SECTION 6 ACCIDENTAL RELEASE MEASURES

6.1. Personal precautions, protective equipment and emergency procedures

See section 8

6.2. Environmental precautions

See section 12

6.3. Methods and material for containment and cleaning up

| Minor Spills | Avoid breathing vapour and any contact with liquid or gas. Protective equipment including respirator should be used. DO NOT enter confined spaces were gas may have accumulated. Increase ventilation. |
|--------------|--|
| Major Spills | Clear area of all unprotected personnel and move upwind. Alert Emergency Authority and advise them of the location and nature of hazard. Wear breathing apparatus and protective gloves. Prevent by any means available, spillage from entering drains and water-courses. Remove leaking cylinders to a safe place. Fit vent pipes. Release pressure under safe, controlled conditions Burn issuing gas at vent pipes. DO NOT exert excessive pressure on valve; DO NOT attempt to operate damaged valve. |

6.4. Reference to other sections

Personal Protective Equipment advice is contained in Section 8 of the SDS.

7.1. Precautions for safe handling

| Safe handling | Consider use in closed pressurised systems, fitted with temperature, pressure and safety relief valves which are vented for safe dispersal. The tubing network design connecting gas cylinders to the delivery system should include appropriate pressure indicators and vacuum or suction lines. Fully-welded types of pressure gauges, where the bourdon tube sensing element is welded to the gauge body, are recommended. Before connecting gas cylinders, ensure manifold is mechanically secure and does not containing another gas. DO NOT transfer gas from one cylinder to another. |
|----------------------------------|--|
| Fire and explosion protection | See section 5 |
| Other information | Cylinders should be stored in a purpose-built compound with good ventilation, preferably in the open. Such compounds should be sited and built in accordance with statutory requirements. The storage compound should be kept clear and access restricted to authorised personnel only. Cylinders stored in the open should be protected against rust and extremes of weather. |

7.2. Conditions for safe storage, including any incompatibilities

| Suitable container | DO NOT use aluminium or galvanised containers Cylinder: Ensure the use of equipment rated for cylinder pressure. Ensure the use of compatible materials of construction. Valve protection cap to be in place until cylinder is secured, connected. Cylinder must be properly secured either in use or in storage. |
|-------------------------|---|
| Storage incompatibility | As a general rule, hydrofluorocarbons tend to be flammable unless they contain more fluorine atoms than hydrogen atoms. Haloalkanes: are highly reactive:some of the more lightly substituted lower members are highly flammable; the more highly substituted may be used as fire suppressants, not always with the anticipated results. may react with the lighter divalent metals to produce more reactive compounds analogous to Grignard reagents. may produce explosive compounds following prolonged contact with metallic or other azides may react on contact with potassium or its alloys - although apparently stable on contact with a wide rage of halocarbons, reaction products may be shock-sensitive and may explode with great violence on light impact; severity generally increases with the degree of halocarbon substitution and potassium-sodium alloys give extremely sensitive mixtures . BRETHERICK L: Handbook of Reactive Chemical Hazards react with metal halides and active metals, eg. sodium (Na), potassium (K), lithium (Li),calcium (Ca), zinc (Zn), powdered aluminium (Al) and aluminium alloys, magnesium (Mg) and magnesium alloys. Compressed gases may contain a large amount of kinetic energy over and above that potentially available from the energy of reaction produced by the gas in chemical reaction with other substances |

7.3. Specific end use(s)

See section 1.2

SECTION 8 EXPOSURE CONTROLS / PERSONAL PROTECTION

8.1. Control parameters

DERIVED NO EFFECT LEVEL (DNEL)

Not Available

PREDICTED NO EFFECT LEVEL (PNEC)

Not Available

OCCUPATIONAL EXPOSURE LIMITS (OEL)

INGREDIENT DATA

| Source | Ingredient | Material name | TWA | STEL | Peak | Notes |
|--|---------------------|---|--------------------------|-------------------------|------------------|---|
| UK Workplace Exposure Limits (WELs) | R-134A | 1,1,1,2-Tetrafluoroethane (HFC 134a) | 4240 mg/m3 / 1000 ppm | Not Available | Not Available | Not Available |
| UK Workplace Exposure Limits (WELs) | n-Butane, 99.95% | Butane | 1450 mg/m3 / 600 ppm | 1810 mg/m3 / 750 ppm | Not Available | Carc, (only applies if Butanecontains more than 0.1% of buta-1,3-diene) |

| l | EMERGENCY LIMITS | | | | | |

| | R125 | Not Available | | Not Available | | |
| | n-Butane, 99.95% | Not Available | | Not Available | | |

| 8.2.1. Appropriate engineering controls | Engineering controls are used to remove a hazard or place a barrier between the worker and the hazard. Well-designed engineering controls can be highly effective in protecting workers and will typically be independent of worker interactions to provide this high level of protection. The basic types of engineering controls are: Process controls which involve changing the way a job activity or process is done to reduce the risk. Enclosure and/or isolation of emission source which keeps a selected hazard "physically" away from the worker and ventilation that strategically "adds" and "removes" air in the work environment. |
|---|---|
| 8.2.2. Personal protection | |
| Eye and face protection | Chemical goggles. Full face shield may be required for supplementary but never for primary protection of eyes. Contact lenses may pose a special hazard; soft contact lenses may absorb and concentrate irritants. A written policy document, describing the wearing of lenses or restrictions on use, should be created for each workplace or task. |
| Skin protection | See Hand protection below |
| Hands/feet protection | When handling sealed and suitably insulated cylinders wear cloth or leather gloves. Insulated gloves: NOTE: Insulated gloves should be loose fitting so that may be removed quickly if liquid is spilled upon them. Insulated gloves are not made to permit hands to be placed in the liquid; they provide only short-term protection from accidental contact with the liquid. |
| Body protection | See Other protection below |
| Other protection | Protective overalls, closely fitted at neck and wrist. Eye-wash unit. Ensure availability of lifeline in confined spaces. Staff should be trained in all aspects of rescue work. |
| Thermal hazards | Not Available |

Respiratory protection

Type AX Filter of sufficient capacity. (AS/NZS 1716 & 1715, EN 143:2000 & 149:2001, ANSI Z88 or national equivalent)

Where the concentration of gas/particulates in the breathing zone, approaches or exceeds the "Exposure Standard" (or ES), respiratory protection is required. Degree of protection varies with both face-piece and Class of filter; the nature of protection varies with Type of filter.

| Required Minimum Protection Factor | Half-Face Respirator | Full-Face Respirator | Powered Air Respirator |
|------------------------------------|----------------------|----------------------|------------------------|
| up to 5 x ES | Air-line* | AX-2 | AX-PAPR-2 ^ |
| up to 10 x ES | - | AX-3 | - |
| 10+ x ES | - | Air-line** | - |

* - Continuous Flow; ** - Continuous-flow or positive pressure demand

^ - Full-face

A(All classes) = Organic vapours, B AUS or B1 = Acid gasses, B2 = Acid gas or hydrogen cyanide(HCN), B3 = Acid gas or hydrogen cyanide(HCN), E = Sulfur dioxide(SO2), G = Agricultural chemicals, K = Ammonia(NH3), Hg = Mercury, NO = Oxides of nitrogen, MB = Methyl bromide, AX = Low boiling point organic compounds(below 65 degC)

8.2.3. Environmental exposure controls

See section 12

SECTION 9 PHYSICAL AND CHEMICAL PROPERTIES

9.1. Information on basic physical and chemical properties

| Appearance | Colourless liquified gas with a slight odour. | | |
|--|---|--|----------------|
| | | | |
| Physical state | Liquified Gas | Relative density (Water = 1) | 1.2 |
| Odour | Not Available | Partition coefficient n-octanol / water | Not Available |
| Odour threshold | Not Available | Auto-ignition temperature (°C) | Not Available |
| pH (as supplied) | Not Available | Decomposition temperature | Not Available |
| Melting point / freezing point (°C) | Not Available | Viscosity (cSt) | Not Available |
| Initial boiling point and boiling range (°C) | Not Available | Molecular weight (g/mol) | Not Applicable |
| Flash point (°C) | Not Available | Taste | Not Available |
| Evaporation rate | Not Available | Explosive properties | Not Available |

| Not Available | VOC g/L | Not Available | Vapour density (Air = 1) |

9.2. Other information

Not Available

SECTION 10 STABILITY AND REACTIVITY

| 10.1.Reactivity | See section 7.2 |
|---|--|
| 10.2.Chemical stability | Unstable in the presence of incompatible materials. Product is considered stable. Hazardous polymerisation will not occur. |
| 10.3. Possibility of hazardous reactions | See section 7.2 |
| 10.4. Conditions to avoid | See section 7.2 |
| 10.5. Incompatible materials | See section 7.2 |
| 10.6. Hazardous decomposition products | See section 5.3 |

SECTION 11 TOXICOLOGICAL INFORMATION

11.1. Information on toxicological effects

| Inhibition of vapours may cause drowsiness and dizciness. This may be accompanied by sleepiness, reduced alertness, loss of reflexes, luck of contribution, and verigo. Inhibition of vapours are acrosite (mists, fumes), generated by the material during the course of normal handling, may be damaging to the health of the individual. Inhibition of vapours are acrosite (mists, fumes), generated by the material during the course of normal handling, may be damaging to the health of the individual. Inhibition of vapours are acrosite (mists, fumes), generated by the material during the course of normal handling, may be damaging to the health of the individual. Inhibition Consideration can produce non-specific flu-like symptoms such as chills, fever, weaknes, mustle pain, headache, chest discomfort, sore throat and dry cough with rapid recovery, ligh concentrations can cause irregular heartbeats and a stepwise reduction in lung capit/y. Inhibition Non-toxic gates may couge: Non-toxic gates may couge: Non-toxic gates may couge: Variations, and verigo. Non-toxic gates may couge: Non-toxic gates may couge: Non-toxic gates may couge: Variations, interverse of hormal hand may quickly form a concentrated atmosphere in confined or unventilated areas. The vapour may displace and regimes in intervisition in lung capit/y. Non-toxic gates may couge: Inhibition for morally a harding the product. Considered an unlikely route of entry in commercial/indistical environments. Intere is some evidenche to suggest that this material can cause inflamm | | | | | |
|---|---|--|---|--|--|
| Inhalation of according according to the region Inhalation of according according to the nearbolic fibribulation of according the nearbolic fibribulation of according to the nearbolic fibribulation of the nearbolic fibribulation fibribulatin and theneatecording fibribulation fibribulation fibribulation | | Inhalation of vapours may cause drowsiness and dizziness. This may be accompanied by sleepiness, reduced alertness, loss of reflex | | | |
| Internationalise Internationalise Internationalise Internationalise Inhalded Inhalded Inh | | Inhalation of vapours or aerosols (mists, fumes), generated by the material during the course of normal handling, may be damaging to the health | | | |
| Lobor Interface Top Gamma, and the approximation of the second | | There is some evidence to suggest that the material can cause respirator | ry irritation in some persons. The body's response to such irritation can | | |
| discomfort, sore throat and dy cough with rapid recovery. High concentrations can cause irregular hearbeats and a stepwise reduction in lung capacity. inhalation of non-toxic gases may cause: - CNS effects: headche, confusion, diziness, stupor, seizures and coma; - repiratory: shortness of breath and rapid breathing; - cardiovascular: collapse and irregular heart beats; - gastrointestinal: - metables are in breathing zone, acting as a simple asphysiant. This may happen with little warning of overreposure. Acute intoxication by halogenated aliphatic hydrocarbons appears to take place over two stages. Signs of a reversible narcosis are evident in the first stage and in the second stage signs of injury to organs may become evident, a single organ alone is (almost) never involved. Ingestion Not normally a hazard due to physical form of product: Considered an unlikely route of entry in commercial/industrial environments. There is some evidence to suggest that this material can cause inflammation of the skin on contact in some persons. Fly into the buse of the material and ensure that any external damage is suitably protected. Vapourising liquid causes rapid cooling and contact may cause of downs, forstbine, even through normal gloves. Frozen skin tissues are parises and appeer way and yellow. Skin Contact Authough the material is not though soling and contact may cause and burns, frostbine, even through normal gloves. Frozen skin tissues are parises and appeer way and yellow. Skin contact< | | Exposure to fluorocarbons can produce non-specific flu-like symptoms such as chills, fever, weakness, muscle pain, headache, chest | | | |
| Inhaled Timination of non-toxic gases may cause: CNS effects: headache, confusion, dizzines, stupor, seizures and coma; respiratory: biotitores of breathing; cardiovascular: collapse and irregular heart beats; gastrointestinal: mucous membrane irritation, nausea and vomiting. Material is highly volatile and may quickly form a concentrated atmosphere in confined or unventilated areas. The vapour may displace and regular heart beats; gastrointestinal: mucous membrane irritation, nausea and vomiting. Material is highly volatile and may quickly form a concentrated atmosphere in confined or unventilated areas. The vapour may displace and regular beat in the first stage and in the second stage signs of injury to organs may become eviden, a single organ alone is (almost) never involved. Not normally a hazard due to physical form of product. Considered an unlikely route of entry in commercial/industrial environments There is some evidence to suggest that this material can cause inflammation of the skin on contact in some persons. Efficience thors merow enatural oils from the skin, causing inritation, qhroes and sensitivity. Open cuts, abraded or irritated sin should not be exposed to this material Enviro to the use of the skin a progression of colour, charges in through normal gloves. Frozen skin tissues are paines and appear way and velocus. Signs and symptoms of frost-bile may include "pins and meedles", planes. Protecing an stiffening of the skin, a progression of colour, charges in the affected area, (first white, then motifed and blue and eventually block: con recovery, red, hot, painful and bilistered). Although the material is not thought to be an intrant (as classified by EC Directives), direct contact with the | | discomfort, sore throat and dry cough with rapid recovery. High concent | trations can cause irregular heartbeats and a stepwise reduction in lung | | |
| Instruct CNS effects: headache; confusion, dizziness, stupor, seizures and coma; respiratory; shortness of breath and rapid breathing; cardiovacuidan: collapse and irregular heart beats; gastrointestinal: mucous membrane irritation, nausea and vomiting. Material is highly volatile and may quickly form a concentrated atmosphere in confined or unventilated areas. The vapour may displace and replace air in breathing zone, acting as a simple asphysiant. This may happen with little warning of overexposure. Acute intoxication by halogenated alliphatic hydrocarbons appears to take place over two stages. Signs of a reversible narcosis are evident in the first stage and in the second stage signs of injury to organs may become evident, a single organ alone is (almost) never involved. Ingestion Not normally a hazard due to physical form of product. Considered an unlikely route of entry in commercial/industrial environments There is some evidence to suggest that this material can cause inflammation of the skin on contact in some persons. Fluorocarbons remove natural oils from the skin, causing irritation, dryness and sensitivity. Open cuts, abraided or irritated skin should not be exposed to this material. Entry into the blood-stream, through, for example, cuts, abraide burrs, frostible, even through normal gloves. Frozen skin tissues are painless and appear way and yellow. Signs and symptoms of frost-bite may include "pins and needles", paleness followed by numbness, a hardening an stiffening of the skin, a progression of colour changes in the affected area, (first white, then motited and blue and eventually black; on recovery, red, hot, painful and blistered). In addition to carbon dioxide (CO2), methane (CH4) and nitrous oxide (N2O), the greenhouse gases mentioned in the Kyoto Protocol include synthetic substances that share the common feature of being highly persistent in the atmosphere and inhibit radiation from escaping out of the atmosphere. These synthetic substances include hydrocarbons that are partially fluorinated (HCFs) or totally fluorinated (PFCs) as well as sulfur hexafluoride (SF6). The greenhouse potential of these substances, expressed as multiples of that of CO2, are within the range of 140 to 11,700 for HFCs, from 6500 to 9,200 for PFCs and 23,900 for SF6. Once emitted into the atmosphere, these substances have an impact on the environment for decades, centuries, or even for thousands of years.

DO NOT discharge into sewer or waterways.

12.2. Persistence and degradability

| Relevant available data | Not Available | Not Available | Not Available |
| PBT Criteria fulfilled? | Not Available | Not Available | Not Available |

12.6. Other adverse effects

No data available

SECTION 13 DISPOSAL CONSIDERATIONS

13.1. Waste treatment methods

| Product / Packaging disposal | Evaporate residue at an approved site. Return empty containers to supplier. If containers are marked non-returnable establish means of disposal with manufacturer prior to purchase. Ensure damaged or non-returnable cylinders are gas-free before disposal. |
|---------------------------------|---|
| Waste treatment options | Not Available |
| Sewage disposal options | Not Available |

SECTION 14 TRANSPORT INFORMATION

Labels Required

| | PROHEDUCE ALL |
|------------------|---------------|
| Marine Pollutant | NO |
| HAZCHEM | 2TE |

Land transport (ADR)

| 14.1.UN number | 1078 | | |
|---------------------------------------|--|--|--|
| 14.2.Packing group | Not Applicable | | |
| 14.3.UN proper shipping name | REFRIGERANT GAS, N.O.S., such as mixture F1, mixture F2 or mixture F3 (contains tetrafluoroethane and pentafluoroethane) | | |
| 14.4.Environmental hazard | Not Applicable | | |
| 14.5. Transport hazard class(es) | Class 2.2 Subrisk Not Applicable | | |
| 14.6. Special precautions for user | Hazard identification (Kemler)20Classification code2AHazard Label2.2Special provisions274 582 662Limited quantity120 ml | | |

Air transport (ICAO-IATA / DGR)

| | - | | |
|---------------------------------------|--|----------------|--|
| 14.1. UN number | 1078 | | |
| 14.2. Packing group | Not Applicable | | |
| 14.3. UN proper shipping name | Refrigerant gas, n.o.s. * (contains tetrafluoroethane and pentafluoroethane) | | |
| 14.4. Environmental hazard | Not Applicable | | |
| 14.5. Transport hazard class(es) | ICAO/IATA Class2.2ICAO / IATA SubriskNot ApplicableERG Code2L | | |
| | Special provisions Cargo Only Packing Instructions | Not Applicable | |
| | Cargo Only Maximum Qty / Pack | 150 kg | |
| 14.6. Special precautions for user | Passenger and Cargo Packing Instructions | 200 | |
| | Passenger and Cargo Maximum Qty / Pack | 75 kg | |
| | Passenger and Cargo Limited Quantity Packing Instructions | Forbidden | |
| | Passenger and Cargo Limited Maximum Qty / Pack | Forbidden | |
| | | | |

Sea transport (IMDG-Code / GGVSee)

| 14.1. UN number | 1078 |
|---------------------------------------|--|
| 14.2. Packing group | Not Applicable |
| 14.3. UN proper shipping name | REFRIGERANT GAS, N.O.S. (contains tetrafluoroethane and pentafluoroethane) |
| 14.4. Environmental hazard | Not Applicable |
| 14.5. Transport hazard class(es) | IMDG Class 2.2 IMDG Subrisk Not Applicable |
| 14.6. Special precautions for user | EMS NumberF-C, S-VSpecial provisions274Limited Quantities120 mL |

Inland waterways transport (ADN)

| 14.1. UN number | 1078 | | |
|---------------------------------------|--|-------------------------------------|--|
| 14.2. Packing group | Not Applicable | | |
| 14.3. UN proper shipping name | REFRIGERANT GAS, N.O.S., such as mixture F1, mixture F2 or mixture F3 (contains tetrafluoroethane and pentafluoroethane) | | |
| 14.4. Environmental hazard | Not Applicable | | |
| 14.5. Transport hazard class(es) | 2.2 Not Applicable | | |
| 14.6. Special precautions for user | Classification code Special provisions Limited quantity Equipment required Fire cones number | 2A 274; 582; 662 120 ml PP | |
| | Fire cones number | 0 | |

Transport in bulk according to Annex II of MARPOL and the IBC code

Not Applicable

SECTION 15 REGULATORY INFORMATION

15.1. Safety, health and environmental regulations / legislation specific for the substance or mixture

R-134A(811-97-2) IS FOUND ON THE FOLLOWING REGULATORY LISTS

European Customs Inventory of Chemical Substances ECICS (English) European Union - European Inventory of Existing Commercial Chemical Substances (EINECS) (English) UK Workplace Exposure Limits (WELs)

R125(354-33-6) IS FOUND ON THE FOLLOWING REGULATORY LISTS

| | (EINECS) (Eligiisti) |
|--|--|
| N-BUTANE, 99.95%(106-97-8.) IS FOUND ON THE FOLLOWING REGULATORY LISTS | |
| EU REACH Regulation (EC) No 1907/2006 - Annex XVII - Restrictions on the manufacture, placing on the market and use of certain dangerous substances, | European Union (EU) Annex I to Directive 67/548/EEC on Classification and Labelling of Dangerous Substances - updated by ATP: 31 |
| mixtures and articles | European Union (EU) Annex I to Directive 67/548/EEC on Classification and Labelling |
| EU REACH Regulation (EC) No 1907/2006 - Annex XVII (Appendix 1) Carcinogens: | of Dangerous Substances (updated by ATP: 31) - Carcinogenic Substances |
| category 1A (Table 3.1)/category 1 (Table 3.2) | European Union (EU) Annex I to Directive 67/548/EEC on Classification and Labelling |
| EU REACH Regulation (EC) No 1907/2006 - Annex XVII (Appendix 4) Mutagens: | of Dangerous Substances (updated by ATP: 31) - Mutagenic Substances |
| category 1B (Table 3.1)/category 2 (Table 3.2) | European Union (EU) Regulation (EC) No 1272/2008 on Classification, Labelling and |
| European Customs Inventory of Chemical Substances ECICS (English) | Packaging of Substances and Mixtures - Annex VI |
| European Trade Union Confederation (ETUC) Priority List for REACH Authorisation | International Air Transport Association (IATA) Dangerous Goods Regulations - |
| European Union - European Inventory of Existing Commercial Chemical Substances | Prohibited List Passenger and Cargo Aircraft |
| (EINECS) (English) | UK Workplace Exposure Limits (WELs) |

European Union - European Inventory of Existing Commercial Chemical Substances

This safety data sheet is in compliance with the following EU legislation and its adaptations - as far as applicable - : 67/548/EEC, 1999/45/EC, 98/24/EC, 92/85/EC, 94/33/EC, 91/689/EEC, 1999/13/EC, Commission Regulation (EU) 2015/830, Regulation (EC) No 1272/2008 and their amendments as well as the following British legislation: - The Control of Substances Hazardous to Health Regulations (COSHH) 2002 - COSHH Essentials - The Management of Health and Safety at Work Regulations 1999

15.2. Chemical safety assessment

European Customs Inventory of Chemical Substances ECICS (English)

For further information please look at the Chemical Safety Assessment and Exposure Scenarios prepared by your Supply Chain if available.

ECHA SUMMARY

SECTION 16 OTHER INFORMATION

Full text Risk and Hazard codes

| H220 | Extremely flammable gas. |
|------|--|
| H223 | Flammable aerosol. |
| H304 | May be fatal if swallowed and enters airways. |
| H315 | Causes skin irritation. |
| H335 | May cause respiratory irritation. |
| H336 | May cause drowsiness or dizziness. |
| H340 | May cause genetic defects. |
| H350 | May cause cancer. |
| H361 | Suspected of damaging fertility or the unborn child. |
| H370 | Causes damage to organs. |
| H371 | May cause damage to organs. |
| H373 | May cause damage to organs. |
| | |
| R12 | Extremely flammable. |
| R18 | In use, may form flammable/ explosive vapour-air mixture |
| R4 | Forms very sensitive explosive metallic compounds. |

Other information

DSD / DPD label elements

Not Applicable

Relevant risk statements are found in section 2.1

| Indication(s) of danger | Not Applicable |
|-------------------------|--|
| SAFETY ADVICE | |
| S02 | Keep out of reach of children. |
| \$15 | Keep away from heat. |
| \$35 | This material and its container must be disposed of in a safe way. |
| \$56 | Dispose of this material and its container at hazardous or special waste collection point. |

The SDS is a Hazard Communication tool and should be used to assist in the Risk Assessment. Many factors determine whether the reported Hazards are Risks in the workplace or other settings. Risks may be determined by reference to Exposures Scenarios. Scale of use, frequency of use and current or available engineering controls must be considered.

For detailed advice on Personal Protective Equipment, refer to the following EU CEN Standards:

- EN 166 Personal eye-protection
- EN 340 Protective clothing
- EN 374 Protective gloves against chemicals and micro-organisms
- EN 13832 Footwear protecting against chemicals
- EN 133 Respiratory protective devices

Definitions and abbreviations

PC-TWA: Permissible Concentration-Time Weighted Average

- PC-STEL: Permissible Concentration-Short Term Exposure Limit
- IARC: International Agency for Research on Cancer
- ACGIH: American Conference of Governmental Industrial Hygienists
- STEL: Short Term Exposure Limit
- TEEL: Temporary Emergency Exposure Limit_{\circ}
- IDLH: Immediately Dangerous to Life or Health Concentrations
- OSF: Odour Safety Factor
- NOAEL :No Observed Adverse Effect Level
- LOAEL: Lowest Observed Adverse Effect Level
- TLV: Threshold Limit Value
- LOD: Limit Of Detection
- OTV: Odour Threshold Value
- BCF: BioConcentration Factors
- **BEI: Biological Exposure Index**
